

Relative and absolute pressure transmitter type 680

Pressure range

0 ... 0.1 – 1000 bar

The pressure transmitters of type 680 with piezoresistive measuring elements have compensated, calibrated and amplified sensor signals which are available as standard voltage or current outputs.

The transmitter housing is available with various pressure and electrical connections.

Manufactured from stainless steel, its welded construction provides a watertight seal. With its sophisticated building block system, individual designs to meet specific applications are possible.

- Effective overload protection due to chemically etched chip diaphragm and specially designed glass gland
- Fast and affordable customer specific solutions due to building block system, even for small quantities
- Compact construction with SMD technology enhances operational reliability in the presence of shock and vibration
- Welded construction provides 100% sealing against media
